

Soil Profile Pit Dimensions

Number	Usually only one pit is needed. However if your site has highly variable soils more pits may need to be dug.
Location	They should be located in the area to be used for the installation of the on-site wastewater system.
Reminder	At least 48 hours before you dig your pit, call Kansas One Call, 1-800-344-7233 or 1-800-DIG-SAFE
Construction	Slope one end of the pit so that the inspector can have safe access. For reasons of safety you should coordinate the digging of your pit with the Health Department site evaluation in order to minimize the amount of time the pit remains open.
Depth	Do not dig any deeper than 5 feet.
